

Lütjenburg-Hohwacht

Between December 1944 and 19 April 1945, 200 men were forced to make precision compasses for the Kiel firm Anschütz & Co. in Lütjenburg-Hohwacht. These compasses were used for the V2 rocket, among other things. The prisoners, most of them highly skilled experts, were housed in air force barracks on the shore of the Baltic sea.

Hut in 1956

Hut no. 19 of the prisoners' quarters at Lütjenburg-Hohwacht satellite camp. It was photographed during a review of the grounds prior to the demolition of the buildings in April 1956.
