

## Schandelah

Between 8 May 1944 and 2 May 1945, 800 concentration camp prisoners had to build an experimental factory for processing oil shale around four kilometres outside Schandelah for Steinöl GmbH, and they were forced to extract oil shale by open-cast mining. A railway line was constructed from the company grounds to Schandelah station.

## Schandelah in 1946

This photograph of the entrance to former Schandelah satellite camp was probably taken in 1946. The photograph was used as evidence by the British investigators.
